FIXED TIME AI PROGRAMS

Fixed Time AI Programs (FTAI) are ideal for producers looking to shorten their calving interval, have more consistency in their calf crop and utilise advanced genetics without the high price tag.

HEAT DETECTION AI

Heat Detection AI is a great way of getting cows in calf without the use of drugs. This method requires more attention to the cattle while observing and recording heats.

HYBRID PROGRAMS

Hybrid programs are a mix of FTAI & Heat Detection AI. With this program, we synchronise the cows/ heifers on a FTAI program but instead of doing a blanket AI at one particular time, we heat detect and AI 10-12 hours later. Benefits include better conception rates.
